Suhani Gupta

Urvi Sharma

The idea:

MarketLens is a centralized dashboard designed to help users track and monitor selected social-media accounts in one place. Instead of manually checking multiple platforms for new updates, users can add the accounts they want to follow, and the system monitors their activity and provides notifications whenever new posts or updates are detected.

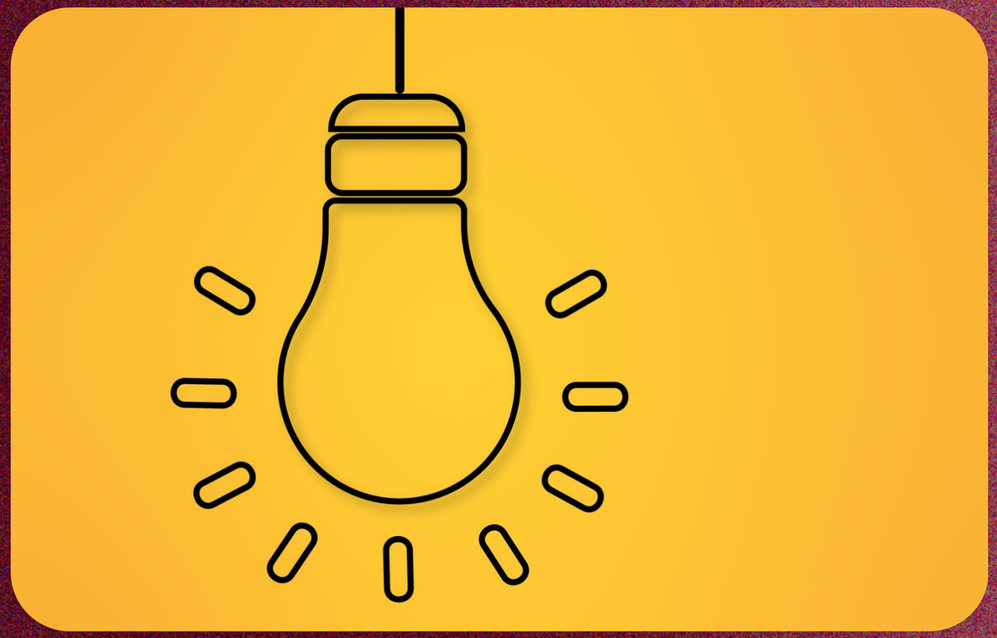

Problem Statement :

- Switch between multiple social-media platforms
- Manually check selected accounts for new posts
- Lack a single place to manage all notifications
- Spend unnecessary time checking for updates

Proposed Solutions :-

- **Centralized Dashboard — View monitored accounts and updates in one place.**
- **Account Monitoring — Select the social-media accounts you want to track.**

- **Automatic Detection — Detect new posts and updates.**
- **Instant Notifications — Notify the user when something new is posted.**

Features :

- **Account Management — Add and manage social-media accounts to monitor.**
- **Post Monitoring — Track new posts from selected accounts.**
- **Real-Time Notifications — Get notified when a new update is detected.**
- **Simple Interface — Easy navigation through Dashboard, Accounts, Posts, Notifications, and Settings.**

Technologies Stack:

- React.js
  Frontend / User Interface
- Java
  Backend programming
  Spring Boot
  REST APIs & backend logic
- Mysql Database
  For storing data
- WebSocket
  Real-time notifications
- Docker
  Containerization and consistent application environment

Future Scope :

- Support for more social-media platforms
- Advanced notification preferences
- Analytics and engagement tracking
- AI-based trend and sentiment analysis

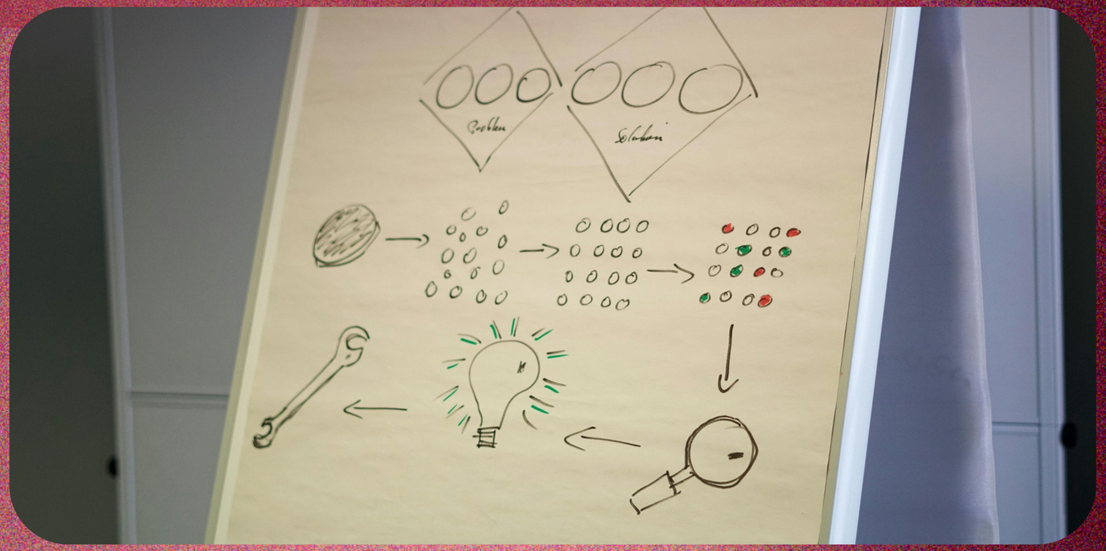

Scalable cloud deployment

Technology Flow :

User → React.js Front end → Spring Boot REST APIs → Business Logic & Monitoring Service → Database + Social Media APIs → New Post Detected → WebSocket / Notification Service → Dashboard

CONCLUSION & KEY TAKEAWAYS

Centralized Monitoring
Brings selected social-media activity into one dashboard.

Refinement and Execution — developing each element with intention, ensuring clarity, balance, and emotional connection in the final design.

Future-Ready
Can be extended with more platforms, analytics, AI-based insights, and cloud deployment.

Thank you so much
